

Google Search Bot v3.2.5

User Manual

- 1- Unzip the archive to a folder.
- 2- Run Google Search Bot (Run as Administrator)
- 3- Go to Help -> Activate
- 4- Activate using your key
- 5- Restart the software
- 6- On Entries tab: Set your campaign name. Set your domain. If you wish to use as wildcard (any url matching your domain) choose Substring method. Do not forget to add / at the end of url.
- 7- Enter your keywords you wish to rank. Your url must be within the first 10 pages of Google. You can also use one keyword. If you use multiple keywords it will rotate.
- 8- Choose the local Google site using the provider field. You can rotate the google sites or choose a specific one using provider method.
- 9- Delays are randomly done using the intervals set. Here is the explanation of delays under options:

Search: number of seconds to wait on each search.

Match: number of seconds to wait after a match is found

Browse: number of seconds to wait on each browsed page within the site

Loop: number of seconds to wait on each loop

- 10- You can block inner urls to be clicked on "Filters" field. Just enter the URL names there. Like: page.html

- 11- Under options field:

- Check external HMA VPN Command to use HMA.
- Set the HMA VPN exe location. (It can be different than the default value)
- If you want to use proxies enter them in proxies in proxies field in this format:
192.168.1.1:8080
- I highly recommend using HMA instead of proxies.
- User agents are already entered under User Agents field. But you can paste any number of user agents you like.
- Runs: Number of times to run the campaigns.
- Browse: Number of inner urls to browse
- Campaigns: Rotate all: Rotates campaigns. Selected: Runs the selected campaign only.

- 12- Before starting the bot connect to Hidemyass VPN using the HMA Pro software. If you do not have a Hidemyass VPN account you can order with a special discount using this link: <http://hidemyass.com/vpn/r9282>

13-Run the HMA Pro VPN software.

- In country selection choose United States or any other country you like. It is a better to use nearby countries.
- Connect to VPN

14-Once you are connected – click start under controls on bot.

15-Bot will start searching the keywords from the list, click your website and will browse within your site. Bot will automatically rotate the VPN IP on every loop. Using the bot you will get unique Google visitors to your site which will boost your Google rankings.

Deathbycaptcha Support:

When using HMA VPN USA IPs you might receive captcha messages on Google search. To solve them automatically you can use bot's built-in Deathbycaptcha support. Just go to Options, fill in your Deathbycaptcha username, password and check the Deathbycaptcha box.

If you do not have a Deathbycaptcha account you can signup here:

<http://www.deathbycaptcha.com>

Auto-restart Feature:

Bot might stop because of various reasons such as unresponsive scripts on sites, HMA VPN problems etc. To make the bot running 24/7 I have implemented a special auto-restart feature. To use it just go to Additional Setting choose which projects to auto-restart: Google or Youtube. Set the restart time. 30 or 60 minutes are recommended. Click on save button. When this feature is enabled projects will automatically start to run when the bot is launched. Also it will automatically close and run the software every X minutes.

**USING DEFAULT VALUES ARE HIGHLY RECOMMENDED
THOSE VALUES ARE TESTED FOR GOOGLE SEO AND ANALYTICS
YOU CAN EXPERIENCE PROBLEMS IF YOU USE BAD VALUES**

**IT IS RECOMMENDED THAT YOU DO NOT USE YOUR COMPUTER WHILE
RUNNING THE BOT. IF IT STUCKS AT SOME POINT JUST KEEP WAITING – IT
WILL SKIP AND CONTINUE TO WORK.**

Youtube View Increaser

Youtube View Increaser is a module in GSB that is used to increase Youtube views. This tool searches the given keywords on Youtube, clicks the result and plays the video. This way you both increase your view count and increase your video ranking. Youtube has a similar search ranking algorithm like Google (both companies are same). Videos getting more clicks on search results are ranked better. Youtube View Increaser clicks your links using different IPs and this boosts your rankings.

Here are the instructions for Youtube View Increaser:

- 1- Run GSB.
- 2- Under options field:
 - Check external HMA VPN Command to use HMA.
 - Set the HMA VPN exe location. (It can be different than the default value)
 - If you want to use proxies enter them in proxies in proxies field in this format:
192.168.1.1:8080
 - I highly recommend using HMA instead of proxies.
 - User agents are already entered under User Agents field. But you can paste any number of user agents you like.
 - Runs: Number of times to run the campaigns.
 - Browse: Number of inner urls to browse
 - Campaigns: Rotate all: Rotates campaigns. Selected: Runs the selected campaign only.
- 3- Click on Youtube Campaign
- 4- Click on campaign name
- 5- Set the video url
- 6- Set the keywords (your video should be listed within first 10 pages)
- 7- Set the delays. (Default values are recommended)
- 8- Click Youtube Control
- 9- Click start
- 10- Bot will start changing IP, going to Youtube and playing Youtube videos.

Tips and Tricks

- To rank your site to first 10 pages of Google you can use this Fiverr gig: <http://fiverr.com/crorkservice/add-your-site-to-700-social-bookmarks>
- For best results use the default values
- Run the bot 2-3 hours/day for optimum results
- Do not stop making SEO while running the bot. This makes things more natural.
- It is recommended that you do not run this bot on sites with AdSense. If you do not wish to remove your AdSense code you can use an ad blocker like this: <http://simple-adblock.com>
- I recommend running the bot till you get to the first page. After you are on first or second page you can stop running it as you will get natural clicks.
- If you face captcha messages from Google try using other countries on HMA. Usually USA IPs get captcha messages.
- You can use this bot on a Windows VPS. I recommend www.damnvp.com for cheap VPS service.
